

Traffic Changes - Reeves Street and Embree Island Road

The Town of Port Hawkesbury would like to advise residents and motorists of upcoming **traffic safety changes** in the Reeves Street and Embree Island Road area.

As part of transportation improvements being implemented by the **Province of Nova Scotia**, changes will be made to the traffic configuration along Reeves Street. These changes include new pavement markings and dedicated turning lanes, as well as the **closure of the east end of Embree Island Road at Reeves Street**.

The east end of Embree Island Road will be converted to a **turning area**. **This closure is required to address a serious traffic safety concern**, and vehicles will no longer be able to enter or exit Embree Island Road at this location. Access to the neighbourhood will continue to be available from the existing west access to Reeves Street.

The revised traffic configuration will also include:

- Dedicated left-turn lanes for the **west access to Embree Island Road, the NSCC driveway, and MacMaster Road**;
- Closure of the existing **right-turn slip lane from Reeves Street to Granville Street via the Granville Street North Bridge**; and
- A **dedicated right-turn lane from Reeves Street onto Granville Street via the Granville Street South Bridge**.

The **Nova Scotia Department of Public Works** is expected to carry out the pavement-marking and associated traffic changes over the coming few weeks. Motorists are asked to use caution while the work is underway, follow any temporary traffic-control measures and posted signage, and be mindful of the new traffic pattern once the changes are in place.

These improvements are intended to **enhance traffic safety in the area** and provide a clearer traffic configuration along this section of Reeves Street.

The Town appreciates the patience and cooperation of residents and motorists during the implementation of these changes.

Please refer to the accompanying map for an overview of the new traffic configuration.
